Key words: Marine geophysics, marine survey, marine archaeology

Abstract: The article is a retrospective of the marine geophysical surveys carried out from 2013 to the present day by th Centre for Underwater Archaeology in cooperation with engineer geophysicist Kiril Velkovsky, KV Solutions Ltd. Th idea is to provide information for the achieved results, accumulated experience and created databases, and to giv information about available accessible resources that could be used in many directions of science and engineering practic

a brief overview of completed projects and achieved results.
On the other hand, to demonstrate the development of the various research methods both in technological and large-scal aspects, as well as in terms of quality of received data and detail. One aspect that is a global trend that has develope dynamically in the last 5-6 years as technology moves towards detail and hyper-detail in the results obtained.

Морски геофизични проучвания 2013 – 2022 г.: Център за подводна археология в сътрудничество с инж. геофизик Кирил Велковски
